

PRD-002 — District Verification and Access Selection

Product: PrepHub V2

Status: Approved with one noted implementation dependency

Depends on:

- PRD-000 — PrepHub Design System
- PRD-001 — Authentication

Related documents:

- PRD-003 — Billing and Subscriptions
 - PRD-004 — Student Dashboard
 - Future School and District Administration PRD
-

1. Purpose

This document defines how an authenticated PrepHub student chooses how they will access the platform and, when applicable, verifies that their school or district provides PrepHub.

PrepHub supports two access methods:

1. District-sponsored access
2. Individual paid subscription

A student's access method must remain separate from their login identity.

A student may create an account using any personal or school email and later verify eligibility using a separate school-issued email.

2. Goals

The district-verification experience must:

- Clearly explain the two available access methods.
- Allow students to check whether their school or district offers PrepHub.

- Allow students to browse partnered schools and districts.
 - Allow students to search for a school or district using live filtering.
 - Verify district eligibility through a school-issued email address.
 - Prevent students from receiving district access based only on search results.
 - Keep login credentials and school verification separate.
 - Grant district-sponsored access without requiring payment.
 - Preserve all student data when the student changes access methods.
 - Connect verified students to the correct school or district for future school-community statistics.
-

3. Non-Goals

PRD-002 does not define:

- Pricing
- Checkout
- Payment processing
- Subscription cancellation
- Refunds
- Authentication
- Password recovery
- District administrator accounts
- District contracts
- Student rosters
- Individual leaderboards
- Teacher or classroom access
- School Community Progress interface design

Pricing and payment are defined in PRD-003.

School Community Progress will be displayed through later student-dashboard and administrator-dashboard requirements.

4. Locked Product Decisions

The following decisions are final for Version 1:

- Students first create a PrepHub account.
- Authentication and district eligibility are separate.

- After account creation, students choose between school access and an individual subscription.
 - Pricing is not displayed on the access-selection screen.
 - Students may search for their school or district before choosing an access method.
 - Search results are informational only.
 - Searching for or selecting a school does not grant access.
 - District access requires verification through a school-issued email.
 - PrepHub sends a verification link to the entered school email.
 - The school email domain must belong to a partnered school or district.
 - Successful verification connects district-sponsored access to the student's existing account.
 - School verification does not change the student's login email.
 - Login email and verified school email are stored separately.
 - A school email may be connected to only one PrepHub account.
 - District-sponsored students do not need to enter payment information.
 - Students may later move from an individual subscription to district-sponsored access without creating another account.
 - Student progress and history always remain attached to the original PrepHub account.
 - Every partnered school will have aggregate School Community Progress metrics.
 - Individual student leaderboards remain tentative and are not included in Version 1.
-

5. Access-Selection Page

5.1 Entry Conditions

The access-selection page appears when:

- A new student completes account creation.
 - An authenticated student does not currently have an active access method.
 - A student returns after leaving the initial access flow unfinished.
 - An individual subscriber chooses to verify newly available district access.
-

5.2 Page Title

Choose how you'll access PrepHub

The page may include a short supporting sentence:

Select the option that applies to you. You can change your access method later.

5.3 Access Cards

Display two large cards.

Card 1 — School Access

Icon: School

Title:

Access Through My School

Description:

My school or district provides PrepHub access.

Primary button:

Continue

Selecting this button routes the student to the school-verification flow.

Card 2 — Individual Subscription

Icon: Payment card

Title:

Individual Subscription

Description:

I want to purchase PrepHub for myself.

Primary button:

View Plans

Selecting this button routes the student to the Pricing page defined in PRD-003.

5.4 Pricing Restrictions

Do not display the following on the access-selection page:

- Plan prices
- Discounts
- Billing periods
- Checkout fields
- Payment details

The page exists only to help the student choose an access path.

6. School and District Directory

6.1 Purpose

The directory helps students determine whether PrepHub is available through their school or district.

It does not prove eligibility or grant access.

6.2 Section Content

Display beneath the access cards:

Heading

Not sure if your school has PrepHub?

Supporting Text

Search for your school or district below.

Search Input

Placeholder:

Search schools and districts

6.3 Browsing

Students must be able to scroll through available partnered schools and districts without entering a search query.

The default list should prioritize organizations currently providing PrepHub.

Each directory result should clearly display:

- Organization name
- Organization type
- Availability status

Organization types may include:

- School
- School district

6.4 Live Search Behavior

Search must update while the student types.

Search must be:

- Case-insensitive
- Fast
- Usable without submitting a separate form
- Based on the beginning of the organization name

Examples:

Entering:

f

shows schools and districts beginning with “F.”

Entering:

fr

narrows the results to schools and districts beginning with “Fr.”

Entering:

frisco

may display:

Frisco ISD

Search should ignore leading and trailing spaces.

6.5 Available Result

Example:

Frisco ISD

PrepHub is available through your district.

Use a clear positive status indicator.

The result remains informational.

It must not automatically grant access or mark the student as verified.

6.6 Unavailable Result

Example:

Lewisville ISD

PrepHub is not currently provided by your district.

Use a clear neutral or unavailable indicator.

Do not suggest that the student has done something wrong.

6.7 No Matching Result

When no matching organization can be found, display:

We couldn't find that school or district. PrepHub may not be available there yet.

The student may still return to either access card.

6.8 Directory Data

The directory must support entries for:

- Current partner schools
- Current partner districts
- Known schools or districts that do not currently provide PrepHub

Each entry must have an explicit availability status.

The directory should be managed through internal administrative tools rather than hard-coded into the interface.

7. School Access Flow

7.1 Entry

Selecting **Continue** on the School Access card routes the student to:

Verify Your School

7.2 Page Content

Title

Verify Your School

Subtitle

Enter your school-issued email to verify your eligibility.

Input

School Email

Primary Button

Verify School Email

Secondary Navigation

Allow the student to return to the access-selection page.

7.3 School Email Purpose

The school email is used only to:

- Verify district eligibility
- Associate the student with a partnered school or district
- Grant district-sponsored access
- Support approved school-level and district-level aggregate reporting

The school email does not automatically become the student's login email.

8. Verification Workflow

8.1 Submission

When the student selects **Verify School Email**:

1. Validate the email format.
 2. Extract the email domain.
 3. Check whether the domain is approved for a partnered school or district.
 4. Confirm that the exact school email is not already linked to another PrepHub account.
 5. Create a secure verification request.
 6. Send a verification email to the school-issued address.
 7. Display a confirmation screen.
-

8.2 Confirmation Screen

Title

Check your school email

Message

We sent a verification link to your school email. Open the email and select the link to verify your access.

Display the partially masked email address when helpful.

Example:

p.....@k12.friscoisd.org

Available Actions

- Resend verification email
 - Use a different school email
 - Return to access options
-

8.3 Verification Link

The verification link must:

- Be securely generated
- Be tied to the intended PrepHub account
- Be tied to the exact school email
- Expire after a configurable period
- Be usable only once
- Not expose sensitive account data

Opening the link confirms that the student controls the school-issued email.

8.4 Login State

If the student opens the verification link while signed into the correct PrepHub account:

- Complete verification immediately.

If the student opens the link while signed out:

- Ask the student to log in.
- Continue verification after successful login.

If the student is signed into a different PrepHub account:

- Do not attach the school email to the wrong account.
 - Explain that the link was created for another account.
 - Allow the student to switch accounts.
-

9. Partner Domain Matching

9.1 Approved Domains

PrepHub must maintain an administrator-managed list of approved school and district email domains.

Examples:

- k12.friscoisd.org
- Other domains explicitly approved for a partner organization

Do not grant access based on a school or district name typed into the search field.

9.2 Domain Record

Each approved domain must connect to:

- A school or district organization
 - Partnership status
 - Access start date
 - Access end date, when applicable
 - Whether the domain is currently active
 - Any approved aliases or additional domains
-

9.3 Matching Rules

Domain matching must:

- Be case-insensitive
- Match the complete approved domain
- Reject lookalike domains
- Reject partial-text matches
- Reject inactive or expired partner domains
- Support multiple approved domains for one district
- Support one district domain serving multiple schools

Example:

An approved domain of:

`k12.friscoisd.org`

must not accept:

`k12.friscoisd.org.example.com`

10. School Association Resolution

PrepHub's School Community Progress feature requires each participating student to be associated with a specific school when possible.

District-wide email domains may identify the district but not the student's individual high school.

Therefore, when one verified domain serves multiple schools, PrepHub must ask the student to select their school from an approved list.

This should happen within the verification-completion flow rather than through a separate lengthy onboarding process.

Field

Select Your School

Options

Only display schools associated with the verified district.

The student must not be able to type an arbitrary unapproved school name.

Once selected, PrepHub connects the account to:

- The verified district
- The selected school

This association supports:

- School Community Progress totals
- District reporting
- School-level engagement analytics

If a partner organization operates only one relevant school, PrepHub may assign that school automatically.

11. Successful Verification

11.1 System Actions

After the school email is verified:

1. Mark the school email as verified.
 2. Link the school email to the existing student account.
 3. Link the student to the correct district.
 4. Link the student to the correct school when applicable.
 5. Create or activate the district-sponsored entitlement.
 6. Preserve any existing PrepHub learning data.
 7. Record the verification date.
 8. Mark the verification token as used.
-

11.2 Success Screen

Display:

Message

Your school district provides PrepHub at no cost.

A celebratory icon or subtle animation may be used.

Primary Button

Go to Dashboard

Selecting the button routes the student to the Student Dashboard.

No payment information is required.

12. Error and Exception States

12.1 Domain Not Associated With a Partner

Message:

This email domain is not currently associated with a PrepHub partner. Check your school email or choose another access option.

Available actions:

- Try another school email
 - Search for school or district
 - View individual plans
-

12.2 School Email Already Linked

Message:

This school email is already connected to another PrepHub account.

Explain that each school email may be used with only one account.

Provide an appropriate path to:

- Log into the existing account
- Contact support when the student believes this is an error

Do not reveal personal information about the other account.

12.3 Invalid Email Format

Message:

Enter a valid school email address.

12.4 Expired Verification Link

Message:

This verification link has expired. Request a new link to continue.

Button:

Send New Link

12.5 Link Already Used

If access was already successfully verified, route the student to the appropriate authenticated destination.

Do not create duplicate entitlements.

12.6 Partnership No Longer Active

Message:

PrepHub access is no longer available through this school or district.

Allow the student to view individual subscription options.

Do not delete the student's previous progress.

12.7 Network or Email Failure

Message:

We couldn't send the verification email. Please try again.

Do not create multiple uncontrolled verification requests when the student repeatedly clicks the button.

13. Access and Account Rules

13.1 Login Email

The login email remains the account's primary authentication email unless the student changes it through a future account-management feature.

13.2 Verified School Email

The verified school email is stored separately from the login email.

Example:

Login email

`student@gmail.com`

Verified school email

`student@k12.friscoisd.org`

13.3 Same Email Used for Both Purposes

If the student created their account using their school email:

- The email may serve as the login email.
- The student must still complete school verification to receive district-sponsored access.

- Successful verification must not create another account.
-

13.4 One Email, One Account

A specific school email may be connected to only one PrepHub account.

This rule prevents students from using the same district identity to activate multiple accounts.

13.5 Existing Individual Subscribers

A student with an individual subscription may later verify district access using the same PrepHub account.

After successful verification:

- Preserve all progress and account history.
- Activate district-sponsored access.
- Do not create another student account.

Cancellation, refunds, credits, and paid-subscription changes are governed by PRD-003.

PRD-002 must not silently cancel or refund a paid subscription.

14. School Community Data Connection

Successful verification must connect the student to an approved school and district record.

This association allows the student's eligible activity to contribute to aggregate metrics such as:

- Questions answered by the school
- Study time completed by the school
- Active students
- Progress toward school-wide goals

School Community Progress must display aggregate data only.

The individual leaderboard remains tentative and is not activated through this PRD.

15. Logical Data Requirements

The exact database implementation may vary, but the product must support the following logical records.

15.1 Organization

Required information:

- Organization ID
- Organization name
- Organization type
- Parent district when applicable
- Partnership status
- Directory visibility
- Access start and end dates
- Created and updated timestamps

Organization types:

- District
- School

15.2 Organization Domain

Required information:

- Domain ID
- Organization ID
- Approved email domain
- Active status
- Effective dates
- Created and updated timestamps

One organization may have multiple approved domains.

15.3 School Membership

Required information:

- Student account ID
 - District ID
 - School ID when applicable
 - Verified school email
 - Verification status
 - Verified date
 - Membership status
-

15.4 Verification Request

Required information:

- Student account ID
 - Requested school email
 - Matched organization
 - Secure token representation
 - Creation time
 - Expiration time
 - Completion time
 - Request status
-

15.5 District Entitlement

Required information:

- Student account ID
- Sponsoring organization
- Entitlement status
- Start date
- End date when applicable
- Created date
- Revoked date when applicable

The entitlement must remain separate from the user's authentication record.

16. Privacy and Security Requirements

PrepHub must:

- Send verification only to the entered school email.
 - Never grant access from search results alone.
 - Never grant access before email ownership is confirmed.
 - Prevent the same school email from activating multiple accounts.
 - Avoid exposing full school emails unnecessarily.
 - Expire and invalidate verification links.
 - Rate-limit verification requests and resend attempts.
 - Protect student-school associations.
 - Limit administrator access to school-email information.
 - Avoid displaying individual student activity in public school totals.
 - Preserve audit records necessary for entitlement security.
 - Follow PrepHub's Privacy Policy and applicable district agreements.
-

17. Responsive and Accessibility Requirements

The entire flow must follow PRD-000.

The experience must be:

- Desktop-first
- Fully responsive
- Keyboard accessible
- Usable with assistive technology
- Clear on tablet and mobile
- Free of horizontal scrolling
- Built with visible focus states
- Designed with properly labeled inputs
- Understandable without relying only on icons or color

The directory should remain easy to scroll and search on smaller screens.

18. Acceptance Criteria

PRD-002 is complete when:

Access Selection

- A newly authenticated student sees two access cards.
- The cards are School Access and Individual Subscription.
- No pricing appears on the page.
- School Access routes to verification.
- Individual Subscription routes to Pricing.

Directory

- Students can browse partnered schools and districts.
- Students can search by school or district name.
- Results update while the student types.
- Prefix filtering works as specified.
- Available and unavailable statuses are clearly displayed.
- Search results never grant access.

Verification

- Students can enter a school-issued email.
- PrepHub validates the domain against an approved partner list.
- PrepHub sends a secure verification email.
- Students can resend an expired or missing verification email.
- Verification confirms control of the school email.
- The same school email cannot be linked to multiple accounts.
- Successful verification activates district-sponsored access.

Account Separation

- Login email and school email remain separate.
- School verification does not change the login method.
- Verification never creates a duplicate student account.
- Existing progress remains attached to the same account.
- Existing subscribers can verify district access without creating another account.

School Association

- Students are connected to the verified district.
- Students are connected to a specific school when required.
- District-wide domains support selection from an approved school list.
- Verified activity can later contribute to aggregate School Community Progress.

Completion

- Successful students see the no-cost access confirmation.
 - The success screen includes **Go to Dashboard**.
 - No payment is required for district-sponsored access.
 - All defined loading, success, and error states work on desktop, tablet, and mobile.
-

19. Future Considerations

The following are excluded from Version 1:

- Teacher-led student invitations
- District roster imports
- Automatic school assignment through student-information systems
- Microsoft school SSO
- Google Workspace domain-wide SSO
- Student transfer workflows
- Multiple simultaneous school memberships
- Parent verification
- Public school landing pages
- Individual student leaderboards
- School-versus-school competitions

These features require separate product decisions before implementation.
