

PRD-004 — Student Home Dashboard

Product: PrepHub V2

Status: Approved

Depends on:

- PRD-000 — Design System
- PRD-001 — Authentication
- PRD-002 — District Verification
- PRD-003 — Billing & Subscriptions

Related Documents

- PRD-005 — Practice

-

1. Purpose

The Student Home Dashboard is the first screen students see after signing into PrepHub.

Unlike the Practice page, the dashboard is **not** where students study.

Its purpose is to help students quickly understand their current progress, stay motivated by visible improvement, and seamlessly continue studying.

The dashboard should feel clean, modern, and encouraging rather than analytical or overwhelming.

2. Product Philosophy

The Student Home Dashboard follows four guiding principles.

2.1 Progress Before Analytics

Students care about improving their SAT score—not reading complex charts.

The dashboard should communicate progress clearly without overwhelming the student with statistics.

2.2 Glanceability

Students should understand the most important information within approximately ten seconds.

The dashboard should answer only three questions:

1. How am I doing?
2. Am I improving?
3. What should I do next?

Every component on the page must support at least one of these questions.

2.3 Motivation Through Improvement

PrepHub celebrates meaningful improvement rather than activity alone.

The platform's primary source of motivation is increasing a student's predicted SAT score.

Secondary metrics exist only to support that goal.

2.4 Practice Happens Elsewhere

The dashboard should never become another study page.

Selecting **Continue Practice** transitions students into their adaptive practice experience defined in PRD-005.

3. Goals

The dashboard must:

- Display the student's current PrepHub Score Prediction.
 - Clearly show improvement over time.
 - Encourage students to continue practicing.
 - Surface useful learning statistics.
 - Highlight strengths and weaknesses.
 - Provide access to School Community.
 - Maintain a clean and uncluttered interface.
-

4. Non-Goals

This PRD does not define:

- Adaptive question generation
 - Practice sessions
 - Question review
 - Progress analytics
 - Billing
 - Authentication
 - School leaderboards
 - School Community interface
 - Profile management
-

5. Dashboard Layout

The Student Home Dashboard consists of the following sections in order:

1. Greeting
 2. PrepHub Score Prediction
 3. Continue Practice
 4. Weekly Statistics
 5. Study Streak
 6. Recent Improvements
 7. Strengths & Weaknesses
 8. School Community Shortcut
-

6. Greeting

The top of the dashboard displays a personalized greeting.

Example:

Welcome back, Prithviraj.

The greeting should use the student's first name collected during account creation.

The greeting exists to make the experience feel welcoming without distracting from the primary content.

7. PrepHub Score Prediction

Purpose

The PrepHub Score Prediction is the primary focus of the dashboard.

It represents the student's estimated SAT performance based on their most recent learning data.

This prediction serves as PrepHub's primary motivational metric.

Display

The hero card includes:

- Heading: **PrepHub Score Prediction**
- Estimated SAT range
- Improvement since the student started using PrepHub

Example:

PrepHub Score Prediction

Estimated SAT

1450–1510

↑ +80 points since you started

Prediction Format

Predictions are displayed as ranges rather than single scores.

Example:

1260–1320

not

1290

This communicates that the prediction is an estimate rather than a guaranteed score.

Updating

The PrepHub Score Prediction updates after every completed adaptive practice set.

The dashboard always displays the most recent prediction.

If the prediction increases, the updated value should be reflected immediately.

If the prediction decreases, the dashboard must display the updated prediction honestly.

PrepHub must never artificially hide decreases.

Interaction

The PrepHub Score Prediction card is informational only.

Selecting the card performs no action.

Students should not navigate away from the dashboard by interacting with the prediction.

8. Continue Practice

Immediately beneath the PrepHub Score Prediction is the primary call-to-action.

Button text:

Continue Practice

Selecting this button opens the Practice experience defined in PRD-005.

This should be the most visually prominent action on the page after the prediction itself.

9. Weekly Statistics

The dashboard displays three summary cards.

Questions This Week

Displays the number of questions completed during the current week.

Study Time This Week

Displays total study time accumulated during the current week.

Total Questions Answered

Displays the student's lifetime number of completed questions.

These cards provide useful context but should remain visually secondary to the PrepHub Score Prediction.

10. Study Streak

The dashboard displays the student's current study streak.

Example:

12 Day Study Streak

A streak represents consecutive days of meaningful study activity.

Opening the application without completing meaningful work does not extend the streak.

The precise definition of meaningful study activity is defined within the Practice PRD.

The Study Streak exists to encourage consistent study habits while remaining secondary to the student's predicted SAT score.

11. Recent Improvements

The dashboard highlights meaningful improvements rather than simply recording activity.

Examples include:

- Estimated SAT increased by 20 points.
- Vocabulary mastery improved.
- Geometry mastery improved.
- Reading comprehension improved.

This section exists to reinforce progress rather than display a chronological activity log.

12. Strengths & Weaknesses

The dashboard displays a concise visual summary of the student's performance across PrepHub's seven learning categories.

- Reading Comprehension
- Grammar
- Vocabulary
- Algebra
- Geometry & Trigonometry
- Advanced Math

- Problem Solving & Data Analysis

The visualization should make it immediately obvious which areas represent strengths and which require additional practice.

The display should remain simple and easily interpreted without requiring numerical analysis.

13. School Community Shortcut

The Student Home Dashboard includes a shortcut allowing students to view their School Community.

Example:

View School Community →

Selecting this shortcut opens the School Community experience defined in PRD-009.

School Community statistics should not occupy significant space on the dashboard itself.

The dashboard should remain focused on the individual student's learning journey.

14. Celebrating Improvement

Whenever the PrepHub Score Prediction increases following a completed adaptive practice set, PrepHub should celebrate the improvement.

Examples include:

- +10 Estimated SAT Points
- +20 Estimated SAT Points
- +30 Estimated SAT Points

Celebrations should feel rewarding without becoming distracting or interrupting the student's workflow.

If the predicted SAT score remains unchanged or decreases, no celebration should be displayed.

15. Responsive Requirements

The Student Home Dashboard follows the design principles established in PRD-000.

The experience must be:

- Desktop-first
 - Fully responsive
 - Keyboard accessible
 - Consistent across desktop, tablet, and mobile
 - Readable without excessive scrolling
 - Free from unnecessary visual clutter
-

16. Acceptance Criteria

The Student Home Dashboard is complete when:

Greeting

- Students are welcomed by first name.

Score Prediction

- The PrepHub Score Prediction is the most visually prominent component.
- Predictions are displayed as score ranges.
- Improvement since joining PrepHub is displayed.
- Predictions update after every completed adaptive practice set.
- Score decreases are displayed honestly.
- The prediction card is not interactive.

Navigation

- The Continue Practice button opens the Practice experience.

Statistics

- Questions This Week is displayed.
- Study Time This Week is displayed.
- Total Questions Answered is displayed.

Study Streak

- The current Study Streak is displayed.
- Meaningful study activity extends the streak.
- Simple application opens do not extend the streak.

Improvements

- Recent Improvements display meaningful learning gains.
- SAT score improvements trigger celebrations.

Strengths & Weaknesses

- All seven learning categories are represented.
- Students can quickly identify stronger and weaker areas.

School Community

- Students can access School Community from the dashboard.
- School Community data does not dominate the dashboard.

Overall Experience

Within approximately ten seconds of opening PrepHub, a student should understand:

- Their current predicted SAT score.
 - Whether they are improving.
 - Exactly what to do next.
-

17. Future Considerations

The following are intentionally excluded from Version 1:

- Goal-setting features

- Percentile rankings
- Daily missions
- Achievement badges
- XP systems
- Gamified currencies
- Calendar widgets
- Complex analytics dashboards
- AI coaching summaries
- Personalized dashboard customization

These features may be evaluated in future versions but should not compromise the dashboard's core philosophy of simplicity and glanceability.
