

PRD-011 — School Administrator Account & Dashboard

Product: PrepHub V2

Status: Approved

Depends on:

- PRD-001 — Authentication & Onboarding
 - PRD-004 — Student Home Dashboard
 - PRD-005 — Practice
 - PRD-006 — Practice Session
 - PRD-007 — Session Review & Results
 - PRD-008 — Progress
 - PRD-009 — School Community
 - PRD-010 — Profile & Settings
-

1. Purpose

The School Administrator Account allows authorized school staff to oversee their school's use of PrepHub while also experiencing the complete student learning product themselves.

Each participating school receives one administrator account. The school may share its login credentials with authorized employees, such as the principal, assistant principals, counselors, testing coordinators, or other designated staff members.

The administrator dashboard should help schools understand adoption, monitor collective educational impact, manage basic student information, and communicate with students without creating substantial additional administrative work.

2. Product Philosophy

The School Administrator Dashboard answers three questions:

1. **How is our school using PrepHub?**
2. **What has our school accomplished collectively?**
3. **How can we help more students benefit from the platform?**

The dashboard should feel like an educational resource rather than a billing or contract-management portal.

PrepHub should remain largely self-sufficient. Administrators should not need to manually assign licenses, approve every student, manage seats, or regularly maintain the platform.

3. Goals

The administrator experience should allow authorized school staff to:

- View high-level school adoption and progress.
 - View all-time aggregated school activity.
 - Search registered students.
 - Correct students' first names and graduation years.
 - Publish school announcements.
 - Email announcements to registered students.
 - View the school's access status and student access period.
 - Contact PrepHub support.
 - Use the full PrepHub student experience for testing and evaluation.
-

4. Non-Goals

The School Administrator Dashboard does **not** include:

- Individual student SAT predictions.
- Individual target SAT scores.
- Individual mastery information.
- Individual practice history.
- Individual question performance.
- Individual study time or questions answered.
- Student rankings or leaderboards.
- Comparisons between schools.
- Daily, weekly, or monthly active-user analytics.
- Complex engagement metrics.

- Report exports.
 - Seat assignment or license allocation.
 - Contract pricing and payment management.
 - Administrator-controlled suspension of student access.
 - Automatic removal of students who leave the school.
-

5. Administrator Account Model

Each participating school receives one shared school administrator account.

The account is associated with:

- One school
- One school-controlled email address
- One password
- Administrator-level permissions for that school

Multiple authorized school employees may use the same account credentials.

PrepHub does not require two-factor authentication for the shared administrator account in V1.

Basic account protections should include:

- Rate limiting after repeated failed login attempts
- Email notifications when the password is changed
- A “Log Out of All Devices” action
- Automatic session expiration after an appropriate period of inactivity
- Password-reset assistance through the school-controlled email or PrepHub support

The school is responsible for sharing the account credentials only with authorized staff.

6. Administrator Navigation

The administrator uses the same PrepHub application as students.

The account receives all standard student navigation and an additional administrator-only area.

Standard student areas include:

- Dashboard
- Practice
- Practice Session
- Session Review
- Progress
- School Community
- Profile & Settings

Administrator-only areas include:

- Admin Overview
- Student Directory
- Announcements
- School Access & Support

This creates one unified product rather than separate student and administrator applications.

7. Full Student Experience

The administrator account can experience PrepHub exactly as a student would.

The account can:

- Complete the initial diagnostic
- Receive a PrepHub Score Prediction
- Complete adaptive practice sessions
- Review completed sessions
- Build a study streak
- Track long-term progress
- Set a target SAT score
- Use the School Community page

This allows school employees to test and understand the student experience before or during deployment.

All administrator learning activity must be excluded from school-wide aggregate statistics.

Administrator activity must not increase:

- Registered student totals
- Registration percentage
- Questions answered

- Study hours
 - Adaptive sessions completed
 - Estimated collective SAT improvement
 - School community goals
 - School milestones
 - Any other student or school aggregate
-

8. Automatic School Association

PrepHub must determine which school a student belongs to during signup.

When a student creates an account through school access, the system associates the account with the correct participating school.

The school association may be determined through approved mechanisms such as:

- The student's verified school email domain
- A school-specific signup link
- A school access code
- Another approved school-verification method

The exact verification method may vary by school or district.

Once the student is successfully verified:

- The student is automatically associated with the school.
- The student appears in the school's registered student directory.
- The student receives school-provided PrepHub access.
- The student contributes anonymously to school-wide aggregate statistics.

Administrators do not manually approve or assign access to each student.

9. Enrollment and Registration

Schools receive access for their full eligible student population rather than a limited pool of seats.

The dashboard displays:

- Total School Enrollment
- Registered PrepHub Students
- Registration Percentage

Total School Enrollment

Total School Enrollment represents the eligible student population covered by the school's PrepHub access.

This value is established by PrepHub based on the school's enrollment information.

School administrators cannot edit the enrollment figure directly.

Registered PrepHub Students

Registered PrepHub Students represents the number of eligible student accounts successfully associated with the school.

This number updates automatically whenever a new student registers through that school.

The administrator account is excluded from this number.

Registration Percentage

The system calculates the percentage of the eligible school population that has registered for PrepHub.

Example:

- Total School Enrollment: 2,100
- Registered PrepHub Students: 840
- Registration Percentage: 40%

The purpose of this metric is to show adoption, not remaining licenses or limited availability.

There are no held, used, or available seats displayed.

10. Admin Overview

The Admin Overview is the primary landing page of the administrator-only area.

It displays a concise, all-time summary of the school's PrepHub activity.

Metrics include:

- Total School Enrollment
- Registered PrepHub Students
- Registration Percentage
- Total Questions Answered
- Total Study Hours
- Total Adaptive Sessions Completed
- Total Estimated SAT Points Improved

All metrics represent student activity only.

The administrator account is excluded from every aggregate.

The dashboard does not include weekly, monthly, or custom date-range filtering in V1.

All school progress metrics are displayed as all-time totals.

11. Estimated Collective SAT Improvement

The dashboard may display the school's Total Estimated SAT Points Improved.

This is calculated by adding each participating student's estimated improvement from their initial PrepHub Score Prediction to their current prediction.

Only the amount of improvement contributes to the school total.

The dashboard does not reveal:

- Which students improved
- Individual starting predictions
- Individual current predictions
- Individual changes

This metric is presented only as an aggregate measure of collective educational impact.

The metric should be labeled clearly as an estimate based on PrepHub predictions, not an official College Board result.

12. Student Directory

The Student Directory displays students who have successfully registered and been associated with the school.

The directory includes:

- First Name
- School Email Address
- Graduation Year
- Account Status
- Registration Date
- Last Active Date

The directory must not display:

- PrepHub Score Prediction
 - Target SAT Score
 - Mastery levels
 - Weakest skills
 - Accuracy
 - Practice answers
 - Session history
 - Study streak
 - Questions answered
 - Study time
 - Individual score improvement
-

13. Student Search and Filtering

Administrators can search the Student Directory using:

- First name
- School email address

Administrators may also filter students by:

- Graduation year
- Account status

The search and filtering experience should remain simple and fast.

Administrators should not need to organize students into classes, manually assign licenses, or create groups for V1.

14. Student Information Management

Administrators may correct limited student profile information when necessary.

Editable fields include:

- First Name
- Graduation Year

Administrators cannot edit:

- Student email address
- School association
- Academic data
- Subscription information
- Authentication method

Administrators cannot:

- Disable a student's access
- Suspend a student
- Delete a student's account
- Reset the student's progress
- Remove completed activity
- Transfer a student to another school

Issues involving email addresses, school association, account deletion, or access problems must be handled through PrepHub support.

15. Students Who Leave the School

PrepHub does not require administrators to identify or remove students who transfer, graduate, or otherwise leave the school during the active student access period.

If a student received access while eligible, the student may retain access for the remainder of the school's established student access period.

The system should not automatically delete the student's account or learning progress.

This reduces administrative work and ensures that students do not unexpectedly lose access to their educational history.

Future access after the school's student access period may depend on the school's continued participation or the student selecting an individual subscription.

16. Announcements

School administrators can create announcements for students associated with their school.

Each announcement includes:

- Title
- Message
- Publication date
- Optional expiration date

An announcement is:

- Displayed inside PrepHub to students from that school
- Sent to those students by email

Announcements must only be delivered to registered student accounts associated with the administrator's school.

Administrators cannot send announcements to:

- Students at other schools
 - Independent PrepHub users
 - Unregistered students
 - External email lists
-

17. Announcement Email Delivery

When an administrator publishes an announcement, PrepHub sends the announcement to the school email address associated with each registered student account.

The email should clearly identify:

- The school
- The announcement title
- The announcement message
- That the message was distributed through PrepHub

PrepHub should prevent accidental repeated delivery caused by page refreshes or duplicate submission.

The administrator should see confirmation that the announcement was published and queued for email delivery.

Delivery statistics and advanced email analytics are not required for V1.

18. Announcement Management

Administrators can:

- Create an announcement
- Preview an announcement before publishing
- Publish an announcement
- View active announcements
- View previous announcements
- Remove an active announcement
- Set an optional expiration date

Expired announcements no longer appear to students inside PrepHub.

Previously delivered emails cannot be recalled.

Announcements do not support:

- Student replies inside PrepHub
- Comments
- Reactions
- Attachments
- Images
- Polls
- Direct messaging
- Student-created posts

The feature is intended for brief educational communication, not as a replacement for the school's primary communication platform.

19. School Access Information

The administrator dashboard includes a simple School Access section.

It displays:

- School Access Status
- Student Access Period
- PrepHub Support Contact

Example:

School Access Status: Active

Student Access Period: August 2026–May 2027

The dashboard does not prominently display:

- Contract amount
- Per-student price
- Invoices
- Payment details
- Contract negotiations
- License utilization
- Renewal sales messaging

The purpose of this section is to clarify whether students currently have access and when that access applies.

20. PrepHub Support

Administrators have access to a clear PrepHub support contact.

Support may assist with:

- Administrator password resets

- Incorrect student email addresses
- Incorrect school associations
- Student access problems
- Technical issues
- Announcement-delivery problems
- Enrollment corrections
- Other account issues that administrators cannot resolve themselves

Support should be easy to locate without making the dashboard feel like a sales or billing portal.

21. Privacy

Student privacy is a core requirement of the administrator experience.

Administrators may see only the limited identifying information required to manage school association and basic account records.

Administrators must not receive access to individual academic performance.

PrepHub will not expose individual:

- Predicted SAT scores
- Score improvement
- Target scores
- Category mastery
- Weakest skills
- Answers
- Explanations viewed
- Accuracy
- Study time
- Questions answered
- Practice-session history

School-wide statistics must be aggregated.

The dashboard should not allow administrators to reverse-engineer a specific student's academic performance from school totals.

22. Empty States

The administrator dashboard should provide clear empty states when the school has limited or no activity.

Examples:

No Registered Students

No students have registered through your school yet. Once students create their accounts using your school's access method, they will appear here automatically.

No Practice Activity

Your students have not completed any practice activity yet. School-wide progress will appear after students begin studying.

No Announcements

No announcements have been published. Create an announcement to share an update with your registered students.

Empty states should explain what will happen next without requiring administrators to manually configure student accounts.

23. Visual Design

The School Administrator Dashboard should feel:

- Simple
- Educational
- Trustworthy
- Calm
- Easy to understand

The overview should prioritize a small number of large, clearly labeled metrics.

The dashboard should avoid:

- Dense analytics
- Excessive charts
- Enterprise software complexity

- Sales-oriented messaging
- Competitive comparisons
- Technical terminology

The administrator should understand the school's usage and progress within seconds of opening the page.

24. Acceptance Criteria

Administrator Account

- Each participating school has one administrator account.
- Multiple authorized employees can use the shared credentials.
- Two-factor authentication is not required in V1.
- Repeated failed login attempts are rate-limited.
- Password changes trigger an email notification.
- The account supports logging out of all devices.

Student Experience

- The administrator account can use all standard student features.
- Administrator practice activity is excluded from every school statistic.
- The administrator account is not included in registered student totals.

Automatic School Association

- Eligible students are associated with the correct school during signup.
- Students appear automatically in the administrator directory after registration.
- Administrators do not manually assign seats or approve every registration.

Admin Overview

The dashboard displays:

- Total School Enrollment
- Registered PrepHub Students
- Registration Percentage
- Total Questions Answered
- Total Study Hours

- Total Adaptive Sessions Completed
- Total Estimated SAT Points Improved

All metrics are all-time totals.

Student Directory

The directory displays:

- First Name
- School Email Address
- Graduation Year
- Account Status
- Registration Date
- Last Active Date

Administrators can search by first name or school email.

Administrators can filter by graduation year and account status.

Student Management

- Administrators can edit a student's first name.
- Administrators can edit a student's graduation year.
- Administrators cannot edit student email addresses.
- Administrators cannot disable or delete student accounts.
- Administrators cannot view individual academic performance.

Announcements

- Administrators can create a title and message.
- Administrators can preview before publishing.
- Announcements appear inside PrepHub.
- Announcements are emailed to registered students at the school.
- An optional expiration date is supported.
- Administrators can remove active announcements.
- Announcements cannot include attachments or student replies.

School Access

The dashboard displays:

- School Access Status

- Student Access Period
- PrepHub Support Contact

The dashboard does not function as a billing or contract-management portal.

Privacy

- No individual predicted scores are visible.
- No individual mastery data is visible.
- No individual practice activity is visible.
- No student rankings are included.
- No school comparisons are included.

Overall Experience

After using the School Administrator Dashboard, authorized staff should understand:

- How many students have registered
- How much the school has accomplished collectively
- Whether school access is currently active
- How to locate registered students
- How to correct basic student information
- How to communicate with students
- How to contact PrepHub when additional assistance is needed

The dashboard should provide this information without making administrators feel that PrepHub has created another system they must constantly manage.
