

PRD-017 — School Organizations, Contracts & Student Access

Status: Ready for Implementation

Version: 1.0

Dependencies: PRD-001 — Authentication & Account Creation; PRD-003 — Billing & Subscriptions; PRD-009 — School Community; PRD-010 — Profile & Settings; PRD-011 — School Administrator Account & Dashboard

1. Purpose

This PRD defines the organization, contract, administrator, student-membership, and entitlement systems that provide school-funded PrepHub access.

The system must support:

- Individual school organizations
- District organizations containing multiple schools
- Unlimited student access under active school or district contracts
- Student enrollment through the existing school-email verification flow
- Multiple administrators with separate accounts
- Contract activation, expiration, renewal, suspension, and archival
- Automatic graduation-based access expiration
- Coexistence of school access and individual subscriptions
- Owner management of organizations, administrators, and students

School contracts do not use licensed seat limits.

Every eligible student from a contracted organization may receive access after successfully completing the required school-email verification flow.

2. Roles

The school-access system supports these roles:

OWNER

SCHOOL_ADMINISTRATOR

STUDENT

Owner

The single PrepHub Owner may:

- Create and manage organizations
- Create administrator accounts
- Assign administrators to organizations
- Configure contracts
- Activate, suspend, renew, and archive organizations
- Manually activate, remove, restore, or reassign student memberships
- View all organizations and memberships

School Administrator

A School Administrator may:

- Access only assigned organizations
- View eligible student information and progress
- Remove or restore students within their assigned scope
- Mark students as graduated
- Use the functions defined in PRD-011

Administrators may not:

- Create organizations
- Create other administrator accounts
- Change contracts
- Change organization dates or status
- View billing information
- View internal pricing or Owner notes

Student

A Student may:

- Obtain school-funded access through the existing verified-school-email signup flow
- View which organization provides their access
- Maintain an individual subscription at the same time
- Retain their account and progress when school access ends

Students may not:

- Voluntarily leave an organization in V1
 - Transfer themselves to another organization
 - Create or edit school memberships
-

3. Organization Structure

The system must support two organization types:

SCHOOL
DISTRICT

School organization

A School represents one individual high school.

District organization

A District represents a school district and may contain multiple School records.

Every student under a District contract must still be assigned to one specific School.

This school assignment is required for:

- School Community
 - School-level administrator reporting
 - Student organization display
 - Graduation and membership management
-

4. Organization Status

Supported organization statuses:

SETUP
ACTIVE
EXPIRED
SUSPENDED
ARCHIVED

Setup

The organization exists but its contract has not started or configuration is incomplete.

Students do not receive school-funded access.

Active

The contract is currently valid and verified eligible students receive school-funded access.

Expired

The contract end date has passed without an active renewal.

Student accounts and memberships remain stored, but school-funded access is unavailable.

Suspended

The Owner has manually disabled the organization before its normal contract end date.

Suspension immediately disables school-funded access while preserving all data.

Archived

The organization is retained for historical purposes and is no longer operational.

Archived organizations cannot provide access.

5. Organization Data

Each organization must store:

organizationId
organizationType
officialName
city
state
schoolYear
contractStartDate
contractEndDate
status
parentDistrictId
internalNotes

createdAt
updatedAt
archivedAt

Required behavior

- `parentDistrictId` must be null for District organizations.
 - A School may reference one parent District.
 - Contract dates must use the organization's applicable local date.
 - Internal notes are visible only to the Owner.
 - Organizations must never be automatically deleted.
-

6. Organization Creation

Only the Owner may create an organization.

Required creation fields:

- Official organization name
- Organization type
- City
- State
- School year
- Contract start date
- Contract end date

When creating a District, the Owner must be able to create or associate its individual schools.

A new organization begins with status:

SETUP

It becomes Active when:

- Required organization data is complete
 - The contract start date has arrived
 - The contract end date has not passed
 - The Owner activates the organization
-

7. Administrator Accounts

7.1 Separate accounts

Every administrator must receive a separate PrepHub account.

Administrators must not share one email/password login.

Multiple administrators may manage the same school or district.

There is no fixed maximum number of administrators in V1.

7.2 Account provisioning

Only the Owner may create and assign administrator accounts.

The Owner must:

1. Create or identify the administrator account.
2. Configure the administrator's email/password login.
3. Assign the administrator to one or more organizations.
4. Define the administrator's organization scope.

There is no administrator self-registration or administrator invitation workflow in V1.

Passwords must be stored using the platform's secure password-handling system and must not remain visible after account creation.

7.3 Administrator scope

A District Administrator may view:

- The District
- Every School under that District
- Every eligible student under those Schools

A School Administrator may view only:

- Their assigned School
- Students assigned to that School

An administrator may be explicitly assigned to multiple Schools.

7.4 Administrator removal

Removing an administrator assignment must:

- End access to that organization immediately
 - Preserve the administrator's underlying account
 - Preserve historical records of actions where needed
 - Not affect other organization assignments
-

8. Student Enrollment

Student enrollment must use the school-email verification flow already defined in the earlier authentication and school-access requirements.

PRD-017 must not introduce:

- Join codes
- CSV roster uploads
- Manual school rosters
- Administrator approval queues
- Licensed-seat allocation
- Automatic access based only on an unverified email domain

Enrollment flow

1. The student selects school-provided access during signup or account setup.
2. The student identifies their school through the existing school search flow.
3. PrepHub sends verification to the student's eligible school email.
4. The student successfully verifies that school email.
5. PrepHub confirms that:
 - The organization exists.
 - The organization is Active.
 - The school email is eligible under the previously defined verification rules.
 - The student does not already have an incompatible active school membership.
6. PrepHub creates or activates the student's School Membership.
7. The student receives full school-funded access.

No active membership is created before successful verification unless the Owner uses a manual override.

9. Student Membership

Each student may have only one active school membership at a time.

Required membership data:

membershipId
studentId
organizationId
schoolId
verifiedSchoolEmail
currentGrade
expectedGraduationYear
status
activationMethod
activatedAt
removedAt
graduatedAt
restoredAt
createdAt
updatedAt

Supported membership statuses:

ACTIVE
REMOVED
GRADUATED

Contract expiration or suspension should not delete or permanently remove memberships. Effective access is determined by both membership and organization status.

Activation method

SCHOOL_EMAIL_VERIFICATION
OWNER_OVERRIDE

Owner overrides must be recorded distinctly from normal school-email verification.

10. Grade and Graduation

Membership must store:

- Current grade: 9, 10, 11, or 12
- Expected graduation year

School access must automatically end on:

July 1 of the expected graduation year

On that date:

- The membership becomes Graduated.
- School-funded access ends.
- The student account and progress remain.
- The administrator loses access to future student activity.

The Owner or assigned administrator may update the expected graduation year when it is incorrect.

The Owner or administrator may also mark a student as graduated manually.

11. Unlimited Contract Access

School and District contracts provide unlimited student access.

The system must not contain:

- Seat counts
- Seat limits
- Seat consumption
- Waitlists
- Seat-allocation failures
- Per-student contract quotas

Any eligible student from an Active contracted organization may activate school access through successful school-email verification.

The contract applies equally to all eligible students. One student must not be denied access because other students enrolled first.

12. School Access Entitlement

Active school access grants the same learning features as an active individual subscription.

School access must not create:

- A Stripe customer
- A Stripe subscription
- A billing record for the student
- A payment method requirement

The centralized paid-access rule must be equivalent to:

```
hasPaidAccess =  
  hasActiveIndividualSubscription  
  OR hasActiveSchoolEntitlement
```

An active school entitlement requires:

```
membership.status == ACTIVE  
AND organization.status == ACTIVE  
AND currentDate < July 1 of expectedGraduationYear
```

All paid-feature checks must use the centralized entitlement service.

Individual product areas must not implement separate school-access checks.

13. Interaction With Individual Subscriptions

School access and individual subscription access may coexist.

Existing subscriber gains school access

If a paying individual subscriber activates school access:

- Their individual subscription remains active.
- PrepHub must notify them that their school now provides equivalent access.
- PrepHub must warn that they may be paying unnecessarily.
- PrepHub should provide a direct path to subscription management or cancellation.
- PrepHub must not automatically cancel the subscription.

Purchase while school access is active

A student may purchase an individual subscription while school access is active.

Before purchase, PrepHub must warn that the student already has full school-funded access.

One entitlement ends

If school access ends but the individual subscription remains active:

- Access continues without interruption.

If the individual subscription ends but school access remains active:

- Access continues without interruption.

If both entitlements are inactive:

- Preserve the account.
 - Preserve diagnostic, practice, progress, and historical results.
 - Lock paid adaptive-practice functionality.
 - Allow access to applicable account and prior-result pages.
 - Present individual subscription options.
-

14. Removing and Restoring Students

The Owner and assigned School Administrators may remove a student.

Removal must:

- Change the membership status to Removed.
- End school-funded access immediately.
- Preserve the student's account and progress.
- Preserve historical school reporting from the period of membership.
- Prevent the former organization from viewing future student activity.

A removed student may be restored when:

- The organization is Active.
- The student has not graduated.
- The Owner or assigned administrator performs the restoration.

Restoration must reactivate the existing membership rather than create a duplicate.

Students cannot remove themselves in V1.

15. School Transfers

Students cannot initiate or complete school transfers themselves in V1.

If a student with an Active membership attempts to verify a different school:

- Do not automatically replace the existing membership.
- Do not create a second active membership.
- Inform the student that school access is already connected to another school.
- Direct the student to contact PrepHub support or their administrator.

The Owner may manually resolve exceptional transfers by:

1. Ending the previous membership.
2. Assigning the new organization and school.
3. Recording the membership change.

A dedicated student-facing transfer workflow is out of scope.

16. Contract Activation and Expiration

16.1 Activation

School-funded access begins only when:

- The organization status is Active.
- The contract start date has arrived.
- The contract end date has not passed.
- The student has an Active eligible membership.

16.2 Expiration

On the contract end date:

- The organization becomes Expired.
- School-funded access ends for all students.
- Membership records remain stored.

- Student accounts and progress remain.
- No new school-email activation may succeed.
- Administrators retain read-only historical dashboard access.

Administrators may view only data generated on or before the contract expiration timestamp.

They must not see student activity performed after school access ended.

16.3 Suspension

The Owner may suspend an organization at any time.

Suspension must:

- End school-funded student access immediately
- Block new student activations
- Preserve memberships and data
- Place administrator access into read-only historical mode
- Record the suspension timestamp

16.4 Renewal

When an Expired contract is renewed:

- The Owner updates the contract dates.
- The organization becomes Active on the applicable start date.
- Previous Active memberships regain school-funded access automatically.
- Students marked Removed must not reactivate.
- Students marked Graduated must not reactivate.
- Students whose expected graduation date has passed must not reactivate.

The system must not require students to verify their school email again after a normal contract renewal.

17. School-Email Reverification

Recurring school-email verification is not required.

After successful activation, access continues until one of these occurs:

- Contract expiration
- Organization suspension

- Membership removal
- Graduation
- Manual Owner intervention

The Owner may require or perform a new verification only as an exceptional support action.

18. Owner Schools Page

The internal Owner dashboard must add a fourth primary page:

Schools

The Schools page must use a compact table.

Required columns:

Column	Content
Organization	Official name
Type	School or District
Status	Setup, Active, Expired, Suspended, or Archived
Contract	Start and end dates
Active Students	Current active membership count
Administrators	Number of assigned administrators
Updated	Last updated date
Actions	Open/Edit and additional actions

No seat-limit column or controls may exist.

Owner actions

The Owner must be able to:

- Create an organization
- Edit organization details
- Add or remove Schools under a District

- Create administrator accounts
- Assign or remove administrators
- Activate an organization
- Suspend an organization
- Renew or extend a contract
- Archive an organization
- View student memberships
- Manually activate a student
- Remove or restore a student
- Update student grade or graduation year
- Resolve exceptional school transfers

Administrator impersonation is not included.

19. Administrator Visibility

Administrators may view the following for students within their scope:

- First name
- Current grade
- Expected graduation year
- PrepHub account email
- Verified school email
- Membership status
- Activation date
- Academic and usage progress permitted by PRD-011

Administrators must not view:

- Stripe customer information
- Payment methods
- Individual subscription billing details
- Contract pricing
- Internal Owner notes
- Students outside their assigned scope
- Student activity occurring after membership access ended

Before school access activates, the student must be informed that the organization's administrators may view their PrepHub progress.

Profile and Settings must identify the organization currently providing school access.

20. Notifications

Required student emails:

- School-email verification
- School access activated
- School access removed
- School access expiring in 30 days
- School access expiring in 7 days
- School access expired

Required administrator emails:

- Organization access expiring in 30 days
- Organization access expiring in 7 days
- Organization access expired

Expiration warnings must not be sent when:

- A renewal is already confirmed
- The renewed contract will begin without an access gap

Notifications must not expose billing information.

21. Membership History

The system must retain membership-history events for:

- Activation
- Owner override
- Removal
- Restoration
- Graduation
- Contract expiration
- Contract renewal
- Organization suspension
- Manual school reassignment

A visible detailed audit-history interface is not required in V1.

Required history data:

eventId

membershipId
eventType
performedByAccountId
previousOrganizationId
newOrganizationId
occurredAt
optionalReason

22. Atomicity and Duplicate Protection

The following operations must be atomic and idempotent:

- School-email membership activation
- Owner manual activation
- Membership removal
- Membership restoration
- Graduation
- Contract expiration
- Contract renewal
- Organization suspension
- Manual school reassignment

Duplicate verification callbacks or retried requests must not:

- Create duplicate memberships
 - Create two active school memberships
 - Send repeated activation events
 - Incorrectly restore removed students
 - Generate Stripe records
-

23. Error Handling

School access must not activate when:

- The organization does not exist
- The organization is not Active
- The contract has not started
- The contract has expired
- The organization is suspended or archived
- School-email verification failed

- The student already has an Active membership elsewhere
- The student's graduation date has passed
- Required organization configuration is invalid

When activation fails:

- Preserve the student account.
 - Do not grant paid access.
 - Display a clear reason where appropriate.
 - Do not expose internal contract or organization information.
 - Log the failure for Owner support.
-

24. Core Invariants

The following must always remain true:

- Every administrator uses a separate account.
 - Only the Owner creates and assigns administrator accounts.
 - A student has no more than one Active school membership.
 - District students are assigned to one specific School.
 - School contracts have no seat limits.
 - Verified eligible students receive the same features as individual subscribers.
 - School access creates no Stripe subscription.
 - School and individual entitlements may coexist.
 - Students cannot leave or transfer schools themselves in V1.
 - Contract expiration preserves accounts, progress, and memberships.
 - Renewal automatically restores eligible non-graduated memberships.
 - Removed and Graduated memberships do not reactivate automatically.
 - Former administrators cannot view students' future activity.
 - All paid-feature checks use the centralized entitlement service.
-

25. Acceptance Criteria

PRD-017 is correctly implemented when:

1. The Owner can create a School or District.
2. A District can contain multiple Schools.
3. Each District student is assigned to one School.
4. The Owner can create separate administrator accounts.
5. Multiple administrators can access the same organization.

6. District and School administrator scopes are enforced.
 7. Students activate access through the existing verified-school-email flow.
 8. No join-code or roster-upload workflow exists.
 9. No seat-limit logic exists.
 10. Every verified eligible student may activate access under an Active contract.
 11. School access provides the same learning entitlement as an individual subscription.
 12. School activation creates no Stripe subscription.
 13. Individual and school access can coexist.
 14. Existing subscribers are warned when school access activates.
 15. Students cannot create a second Active school membership.
 16. Removed students immediately lose school-funded access.
 17. Removed students retain their accounts and progress.
 18. Restoring a student reuses the existing membership.
 19. Graduation automatically ends access on July 1 of the expected graduation year.
 20. Contract expiration disables school access without deleting memberships.
 21. Contract renewal automatically restores eligible memberships.
 22. Removed or graduated students do not reactivate after renewal.
 23. Suspension immediately disables school-funded access.
 24. Administrators retain read-only historical access after expiration.
 25. Administrators cannot view student activity after access ends.
 26. Required expiration notifications are sent.
 27. The Owner Schools page supports all required management actions.
 28. Duplicate requests cannot create duplicate memberships or entitlements.
 29. All paid-feature checks use the centralized entitlement rule.
 30. Students are informed that school administrators can view their progress.
-

26. Out of Scope for V1

The following are not included:

- Licensed seat limits
- Join codes
- CSV roster uploads
- Administrator approval queues
- Teacher accounts
- Classroom or course groups
- Student self-removal
- Student self-service transfers
- Administrator self-registration
- Administrator invitation workflows
- Shared administrator credentials
- School-specific feature packages

- School-created subscriptions
- School billing and invoicing
- Administrator impersonation
- Recurring school-email reverification

End of PRD-017
